

Direct Debit & accounting status

Updated 8 October 2026 · Verified following the latest recovery
Scope: 355 payment records scheduled for collection on 6 October 2026.
This report replaces the earlier report showing 102 queued and 130 awaiting status checks.

119 payments have completed accounting. A further 231 confirmed payments are safely queued for Xero.
The queued work is to create and record accounting entries for existing payments — not to collect money again.

Status	Payments	What this means
Accounting complete	119	Payment is confirmed and the accounting process is marked complete, with an invoice linked in iConnect.
Confirmed; awaiting accounting	231	The original 102 requests plus 129 newly recovered confirmations. All have saved accounting requests waiting for Xero.
Failed	4	Confirmed as failed by GoCardless and recorded as failed in iConnect. Member follow-up is needed; these are not in the accounting queue.
Cancelled	1	Recorded as cancelled, separate from the accounting queue.

What has been resolved?

The software issue holding the first 102 accounting requests has been corrected. All 130 records previously awaiting status checks have now been checked directly against GoCardless: **129 are confirmed and one failed**. All 130 statuses have been corrected in iConnect, and accounting work for the 129 confirmed payments has been queued. **No payment records in this batch remain awaiting a status correction.**

Why are the 231 payments queued?

Xero has reached its **daily allowance for requests** and is temporarily refusing further requests. This delays the accounting work; it does not mean these confirmed payments failed. Their original payment and invoice details are saved for processing when Xero permits it.

What happens next?

The 231 requests become eligible for automatic processing from **2:14am UK time on Friday 9 October 2026**, based on the reset time reported by Xero. This is a start time, not a promise that every invoice will be finished immediately. Completion depends on Xero accepting the requests and the remaining checks passing.

For the queued payments: no manual action is needed at present. Please do not create replacement invoices or request another collection solely because the invoice is delayed. **No additional GoCardless collection instructions were sent during recovery.**

Figures count payment records, not unique members, and reflect the verified post-recovery position on 8 October 2026. “Confirmed” does not mean that a payout has reached BNMS’s bank account.

Understanding the failed payments

The four failed payments have the bank-reported reasons below. These are **collection failures, not Xero invoice delays**. All four are now correctly recorded in iConnect. GoCardless reports that it will not automatically retry these payments.

1. £10.66 — mandate cancelled

PM01XW45YJ2FKBK4JFG55489VX72

Reported reason: the member cancelled the Direct Debit mandate at their bank before the payment could be collected.

Suggested action: contact the member to confirm whether the cancellation was intentional. If they wish to continue paying by Direct Debit, arrange a new mandate with their authorisation, or agree an alternative payment method. Do not assume the cancelled mandate can be reused.

2. £10.66 — “refer to payer”

PM01XW45RVKWD3H4VKKERTPJ7QT

Reported reason: the member’s bank could not pay the Direct Debit. GoCardless explains that this usually means insufficient funds, but banks sometimes use this response for other reasons. **Insufficient funds is therefore a possibility, not a confirmed fact.**

Suggested action: contact the member discreetly and ask them to check with their bank. Agree how to settle the outstanding payment. Before any retry, check the current mandate and payment status and follow the applicable authorisation and notification requirements.

3. £13.00 — “refer to payer”

PM01XW45FSM0KCSYDE098GR7CR9S

Reported reason: the same bank response as payment 2. Insufficient funds is common, but the exact cause has not been established.

Suggested action: ask the member to check with their bank and agree a payment arrangement. Do not describe insufficient funds as certain or assume an automatic retry will take place.

4. £13.00 — mandate cancelled

£13.00 · PM01XW45ZPT99HKM21A30YKT83TC

Reported reason: the member cancelled their mandate at the bank before collection. This failure is now correctly recorded in iConnect and has not been added to the accounting queue.

Suggested action: contact the member to confirm their intentions. If they wish to continue, arrange an authorised new mandate or agree another payment method, as for payment 1.

Overall: four failed payments need member follow-up: two cancelled mandates and two “refer to payer” responses. There is also one separate cancelled payment. These are distinct from the 231 confirmed payments awaiting accounting. All payment-status discrepancies in this batch have been resolved.

Failure reasons come from GoCardless’s bank notifications; payment statuses were also checked directly with GoCardless. Suggested follow-up is guidance only: no collection retries or member communications have been initiated by this report.
