

Event Microsite User Guide

Plan, build, launch and retire a focused website for an in-person event — without developer knowledge.

Contents

A practical event lifecycle, from first URL decision to safe post-event retirement.

Example used throughout: Northstar Summit, an in-person conference with overview, agenda, speaker, venue, sponsor and FAQ pages.

1. What an event microsite does

A microsite groups public pages under one URL prefix and gives them their own navigation, header, footer and optional branding.

Example URL pattern
`/northstar-2026` → selected home page
`/northstar-2026/agenda` → agenda page
`/northstar-2026/venue` → venue and travel page

Microsite versus event management

Use the microsite for	Use event management for
Overview and promotional content	Event record, dates and operational status
Agenda presentation and speaker stories	Sessions, tracks and speaker assignments
Venue, travel, sponsors and FAQs	Tickets, prices, eligibility and capacity
Clear links to registration	Registration, payment and attendee records
Event-specific navigation and branding	Confirmations, check-in and attendance

Important: the microsite does not create or manage the event. Build the operational event and registration journey in the event area, then link to it from the microsite.

2. Plan before you build

Recommended page structure

Page	Purpose	Call to action
Overview	Promise, date, place and reasons to attend	Register now
Agenda	Day-by-day programme or summary	View tickets
Speakers	Biographies and session highlights	See the agenda
Venue & travel	Address, map, transport, hotels, accessibility	Plan your journey
Sponsors	Sponsor levels, approved logos and links	Become a sponsor
FAQs	Registration, access, food, dress and contact	Contact the team

Prerequisites

- Permission to use **Microsites** and the page editor.
- Final event name and a short, durable URL prefix.
- Approved logos, colours, social image and sponsor assets.
- The correct event registration URL.
- A colleague who can test while signed out on desktop and mobile.

Choose the URL once. A prefix uses lowercase letters, numbers and hyphens and must be one segment. Changing it later changes every microsite page address.

3. Create the microsite

1. Open **Microsites** and select **New microsite**.
2. Enter the internal name and URL prefix.
3. Add an optional description and logo URL.
4. Choose the initial **Active** state.
5. Select **Save**.

New microsite ×

1 **Name**

Northstar Summit 2026

2 **URL prefix**

northstar-2026

Lowercase letters, numbers and hyphens. Cannot be a reserved route or an existing page slug.

Description (optional)

Visitor information for our annual in-person summit.

Logo URL (optional)

https://...

3 **Active**

ON

Cancel

4 **Save**

Two gates: the microsite must be active and each page must be published for ordinary visitors to see it. If already-published pages will be assigned, keep the microsite inactive until launch.

4. Create, assign and publish pages

Assign an existing page

1. Select the microsite and open **Pages**.
2. Search under **Assign an existing page**.
3. Select **Assign**.
4. Confirm its prefixed URL under **Pages in this microsite**.
5. Publish in the page editor when ready.

Pages Navigation Header & Footer

Pages in this microsite

1 Event overview
/northstar-2026/overview

Home

Remove

Agenda
/northstar-2026/agenda

draft

Remove

Assign an existing page

Search pages by title or slug...

2 Venue & travel
/venue

Assign

Address changes immediately: assignment moves /agenda to /northstar-2026/agenda . The bare address no longer serves that page. Update old links and QR codes.

5. Choose the home page

The home page opens at the short base URL and is where the microsite header logo links.

1. Assign the intended overview page.
2. Select **Edit** beside the microsite name.
3. Choose it from **Home page**.
4. Select **Save**.
5. Test both the base address and full overview address.

Edit microsite ×

Home page

1 Event overview ▾

Served at the microsite's base URL (/northstar-2026) and where the microsite logo links. Choose from assigned pages.

2 Save

Test these routes

/northstar-2026 → Event overview

/northstar-2026/overview → Event overview

Only assigned pages appear in the Home page list. Without a home page, do not promote the base prefix as the visitor landing address.

6. Build the navigation

Microsite items replace normal tenant navigation on microsite pages.

Main navigation

2 **Overview** /northstar-2026/overview ↑ ↓

Programme 2 sub-items ↑ ↓

Agenda /northstar-2026/agenda

- Choose Main navigation, Top bar or Footer; footer remains flat.
- Dropdown menus support up to three levels.
- Search, Social and Account may each be added once.
- Search can include the whole site or only this microsite.

Navigation visibility and page publication are independent. A hidden item does not unpublish a page, and a published page is not added to navigation automatically.

7. Brand the microsite

Override only the event-specific sections. Everything left off inherits tenant branding automatically.

Header controls

Colours, general logo, header logo and sizing, gradient, top-nav font and colours, login/member buttons, lower nav bar.

Sharing and footer

1200×630 social image, tagline, description, social icon colours, and footer source/configuration.

Safe fallback: switching Override off returns that section to tenant branding. Use this instead of copying every tenant setting.

7. Brand the microsite (continued)

Footer choices

Footer source	Behaviour	Use when
Inherit main-site footer	Uses the main site's effective footer, including its reusable Canvas footer.	Legal and contact content should stay identical.
Configured microsite footer	Uses the event footer when Footer Configuration override is enabled.	The event needs its own columns, colours or contact details.
Reusable Canvas footer	Renders the selected reusable footer; later footer-editor changes flow through.	A designed event footer already exists.

Accessible event branding

- Keep text readable against every header and footer background.
- Check the logo at mobile width and at the scrolled size if shrink-on-scroll is enabled.
- Use a 1200×630 share image with event name, date and location.
- Do not place essential information only inside an image.
- Check Login and Member Area states if the Account element is included.

When reusable Canvas footer is selected, choose a footer before saving. When configured microsite footer is selected, turn on the Footer Configuration override.

8. Set microsite typography

1. Open the installed fonts / typography area.
2. Select the event microsite in the **scope** selector, not Main site.
3. Create or edit H1-H4 and paragraph styles.
4. Choose font, size, weight, line height, letter spacing, transform, colour and spacing.
5. Add tablet/mobile values where needed.
6. Set a default for the style type, keep it active, save and preview.

Typography Styles+ Create Style

1 Site scope

Northstar Summit 2026 ▾

Style Type

H1 — Main Heading

Font Family

Poppins

Desktop 48 px

Tablet 40 px

Mobile 32 px

Set as default for this type

Active

If the microsite has no default for a style type, it falls back to the corresponding main-site default. Installing a font makes it available; a scoped typography style applies it to page content.

9. Preview, test and launch

Launch order

1. Finish and save all content.
2. Assign every page and verify its new URL.
3. Choose the home page.
4. Build navigation with prefixed paths.
5. Apply branding and microsite typography.
6. Publish the pages.
7. Switch the microsite Active on.
8. Test while signed out, on desktop and mobile.
9. Only then distribute links and QR codes.

Preview is not publication. Preview as visitor lets an authorised editor inspect a draft. Ordinary visitors still need an active microsite and a published page.

Launch checklist

- | | |
|--|---|
| ☐ Base URL opens the intended home page. | ☐ Every promoted page is assigned and published. |
| ☐ No old bare-slug URL is used. | ☐ Header, dropdown and footer links work. |
| ☐ Registration buttons open the right event. | ☐ Search scope behaves as intended. |
| ☐ Logo links to the home page. | ☐ Mobile text and controls are readable. |
| ☐ Social sharing text and image are suitable. | ☐ Venue and accessibility details are correct. |
| ☐ Signed-out visitors can use public pages. | ☐ No confidential draft content is visible. |

10. Promote and operate the event

Promotion

Use the base URL in general promotion and deep links for agenda, venue or FAQs when useful. Generate QR codes only after the prefix and slugs are final.

Day-of use

- Keep urgent agenda and venue updates short and prominent.
- Put high-priority updates near the top of the overview.
- Re-test registration links if ticket availability changes.
- After editing, save and confirm the public page.
- Use event management—not the microsite—for bookings, attendee records, check-in and attendance.

Content update workflow

Open page editor → make change → Save → Preview as visitor → confirm public page → notify attendees if needed

Search and navigation help visitors find published content. They never override the page's publication state or the microsite's Active state.

Useful handover record

Record the prefix, base URL, home page, page owners, event registration URL, retirement date, and person responsible for post-event content.

11. Retire the microsite safely

Do not delete immediately after the event. Old emails, bookmarks and QR codes may still be in use.

Recommended retirement

- 1. Replace the overview with a post-event message and useful next steps.
- 2. Remove or update registration calls to action.
- 3. Keep recap, sponsor and venue information only as long as required.
- 4. Unpublish pages that should no longer be public.
- 5. At the end of the archive period, switch **Active** off.
- 6. Check campaigns, QR codes and external links before deletion.

Inactive versus delete

Action	Result	Recommendation
Inactive	The microsite stops resolving publicly; its structure remains available to administrators.	Preferred for normal post-event retirement.
Delete	Navigation is deleted and pages return to the default site at their bare slugs.	Use only after reviewing every page and inbound link.

Deletion cannot be undone from this screen. Still-published pages may become available at new bare addresses. Unpublish or review every assigned page first.

12. Troubleshooting

A page shows “not found”

Confirm the microsite is active, the page is assigned and published, and the address uses `/{{prefix}}/{{slug}}`.

The base URL does not show the overview

Edit the microsite, select an assigned page under **Home page**, save and retest.

A page disappeared from the main site

This is expected after assignment. Its address moved from `/{{slug}}` to `/{{prefix}}/{{slug}}`.

Branding looks like the main site

Enable Override for the required card, set the values and select **Save branding**. Non-overridden sections intentionally inherit.

A navigation link opens the wrong place

Use the complete prefixed path, confirm the current page slug and ensure the item is active.

Search includes unwanted main-site results

Edit the Search header element and restrict it to this microsite. The Search element must be present in navigation.

Five facts to remember

1. Active microsite + published page = public availability.
2. Assignment changes the page address.
3. Home page selection enables the short base URL.
4. Microsite navigation replaces tenant navigation.
5. Inactive is usually safer than delete after an event.
